

TASK-02

- Run a Docker container named “DB-app” based on the “mongodb” image, and expose port 80 on the host to port 8082 on the container
- Run a Docker container based in the nginx image, exposing port 8080 on the container and start the container interactively.

Step1: docker run -d --name DB-app -p 80:8082 httpd

Step2: docker ps

Step3: docker run -it -p 8080:8080 nginx
