# TASK-04

Create and use a Docker volume to share data between the host system and a container.

Step 1: Create a Directory on Host Machine

Step 2: Create a File on Host System

Step 3: Run Ubuntu Container with Volume Mount

Step 4: Access Mounted Directory Inside Container

Step 5: Modify the File Inside Container

Step 6: Exit the Container

Restarting the same container and make modification

Checking the same file in different terminal
